

How the Bataan Nuclear Power Plant or BNPP can help our country achieve National Industrialization.

by

Roger D. Posadas, Ph. D. (Physics)

- ❖ **BNPP will serve as an energy hub for the Bataan –Subic-Zambales area because the availability of cheap baseload electricity, industrial heat, and desalinated potable water from BNPP will induce the creation in its vicinity of an agro-industrial cluster (e.g., maritime industries linked to fisheries or metal industries linked to mining or chemical industries linked to agriculture) as large and medium-scale domestic and foreign firms will be attracted to locate in BNPP's vicinity, encouraging in turn local MSMEs to sprout in order to provide the larger firms with an array of various supplies, parts, and services.**
- ❖ **This agro-industrial cluster model can then be replicated in other regions through the construction of new, more advanced Nuclear Power plants in Mindanao, Visayas, and other parts of Luzon.**
- ❖ **BNPP will also induce the establishment of a BNPP- dedicated university, schools, training centers, and R&D institutes leading to the development of an innovative and entrepreneurial**

high-tech *Nucleopolis*, a la *Silicon Valley*, that will promote all kinds of nuclear energy-related new ventures and industries.
